SKIN STAPLER ALFASTEP

SURGICAL DISPOSABLE

Created by Russian developers taking into account the wishes of Russian surgeons.

APPLICATION AREA

A skin stapler is used in surgery (combustiology, traumatology, neurosurgery, vascular, oncology, etc.) for applying skin staples for the purpose of bringing together (approximation) and fixing the free edges of the skin of wounds or incisions.

ADVANTAGES

Ergonomics

The anti-slip design of the handle and thumb rest allow you to control the angle. Gentle pressure with a click allows you to control the completion of the bracket formation.

Closing speed

Alfastep skin stapler significantly reduces the time for closing a skin defect in contrast to routine methods, which reduces the toxic effect of potent drugs in anesthesia.

Seam aesthetics

The Alfastep skin stapler allows for minimal scar formation due to the absence of vascular ischemia and nerve compression with conventional suture material.

Wide range of sizes

A wide range of sizes and the number of staples in the stapler allows the doctor to individually select

the size depending on the complexity and location of the defect

Versatile use

Suitable for use both in the operating room and as part of individual first aid kits, emergency medical kits, etc.

Availability

Alphastep surgical staplers are available to every medical institution in the Russian Federation and individual patients at a competitive price.

Storage

The stapler is supplied in a sterile blister pack measuring 159 x 61 x 18 mm, with a shelf life of **3 years**, allowing the build-up of an adequate hospital supply.

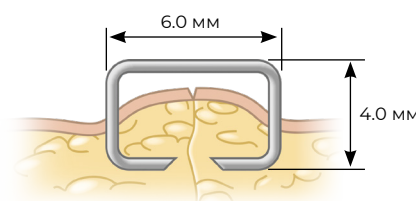

Registration certificate No. RZN 2023/19450 dated January 30, 2023

SIZE RANGE

Size	Stapler Application features	Width / Height / Thickness, mm	
		Before stitching	After stitching
Size A	Skin more than 3-4 mm thick	12.7 / 3.5 / 0.6	7.0 / 4.0 / 0.6
